☑ SOP	☑

I have used this strategy to grow my professional network by **3,000+ followers in six months**. It creates as many as **80 new LinkedIn connections per week** with a dozen or so responses to my messages per week. This approach tends to lead to **three or four meetings per week**, sometimes per day on a good run. - @Paul Prae

Branding and marketing

▼ Perform go-to-market research

Simply put, define *who* you are selling *what* to and *why*. You won't know what businesses and people to reach out to without knowing this first. The *why* is most important. It must be thoroughly researched and well-defined. People don't want to pay you just to learn and have fun. They want to pay you to solve their pain points or make them more money.

Steps:

1. Research large, addressable 🎯 Target Markets (aka a problem domains, industries, or verticals). Preferably, in a problem domain you know intimately. You want people you can relate to; you want to "speak their language." You also want big, juicy markets with lots of activity (aka money moving around).
2. Identify the fastest growing, most well-funded businesses in this space. We've seen good results with startups that have recently doubled in size to 100-200 people and have \$10+ million in revenue or \$100+ million in funding.
3. Identify specific pain points your 🧑 Buyer Personas (WIP) are facing. Preferably, pain points you have faced yourself and understand better than almost all people. This gives you a competitive advantage. The harder they are to solve, the better. This reduces competition.
4. Decide which 🛒 Consulting Services (aka technology solutions to business problems) will best solve your target buyer's pain points. You must know this technology and its architecture well-enough to explain it to a 5th grader.
5. Clearly define the kind of 🧑 Standard Roles it takes to deliver your consulting services. This will help you identify job posts that correlate with demand for your services.

Check out the 📄 Go-to-Market Strategy page for definitions, learning resources, and a template. This essentially leads to a small business plan.

▼ Create a personal brand

™ You need a brand first. This means you need a clearly defined mission for yourself, vision for your future, and opinionated values you are ready to boldly share with others.

Clearly define your:

1. Mission
2. Vision
3. Values

▼ Build a strong LinkedIn profile

Do *everything* the LinkedIn wizard tells you to do. Be a perfectionist and let your Obsessive Compulsive disorder roar! This is a good scenario to fill out everything using all of the best content you've ever produced and tell a story about all of the greatest experiences you have ever had. Yes, this includes unpaid creative pursuits and interesting side projects.

Create:

1. A **title** for yourself that simultaneously represents who you are and who you want to become while also being easily understood by your target buyers. This is not a place to be humble. This is an advertisement. You want to "Wow!" people and give them someone exciting they want to talk to. Hyperbloom doesn't care internally what you put here as long as you are not hurtful or flat out lying. Your goal is to state something that will attract buyers.
2. A one-sentence version of your go-to-market strategy for your **headline**. For example, "Building AI, ML, and Data Platforms and Teams | Serving Healthcare and Life Science Organizations | Focusing on Bioinformatics Data Governance, Protection, and Privacy." Sometimes, this is the only thing buyers will read.
3. **About** section:
 - a. A one-paragraph biography of what is most impressive about you and earns trust with target buyers that you can solve their pain points with your services.
 - b. Clearly list out the pain points you can solve.
 - c. Clearly list out the services you can deliver and how they solve those pain points.
 - d. Close out with something that demonstrates your soft skills, emotional awareness, and personality.

Paul's consulting services include:

- Acting as a Fractional Chief Technology, Data, or AI Officer.
- AI, ML, and Data Platform Architecture.
- Data Governance, Protection, and Privacy Management.
- Business Development, Product Development, and Team Building.
- Leadership Coaching with a Focus on Self-Compassion and Emotional Awareness.

He can help you achieve mission success with AI by protecting you against four key risks:

- Strategy and Reputation - He can prevent a loss of customer trust and brand loyalty due to lack of transparency, equitable decision-making, and accountability in how your AI applications and machine learning workflows are designed, built, and maintained.
- Cybersecurity and Data Privacy - He can mitigate the risk of security and privacy breaches due to inadequate data protection and improper use of sensitive data.
- Legal and Regulatory - He can train, audit, and monitor your organization for unfair practices, data bias, compliance violations, or legal issues related to international data protection laws.
- Machine Learning and Data Operations - He can address operational inefficiencies by improving the accuracy and consistency of your results and the reliability and resilience of your data infrastructure.

His product experience includes architecting and building:

- Machine learning platforms for detecting mental health disorders using audio data.
- Data platforms for detecting brain diseases using neuroimaging data.
- Data lakes and high-performance computing environments for managing and processing genomics data.
- Data collection, analytics, and visualization applications for predicting patient needs and healthcare facility outcomes.

He's a curious and friendly person who loves working on meaningful challenges with wonderful people. Don't hesitate to connect. Paul enjoys meeting new people.

▼ Post and respond to comments and messages regularly

Be bold, personal, unique, and specific! *Obsessively* post only about things related to your go-to-market strategy. Talk about the technology you work with, the industry you work in, and the problem you want to solve.

Content that does well:

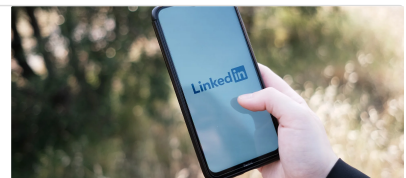

1. Personal stories no one else can tell. The more vulnerable, the better.
2. Educational insights hardly anyone is posting about. Teach a complete lesson in your post.
3. Opinionated reflections on news that is breaking *right now*. Haters gonna hate! Just be you and attract those like you.
4. Write about things generative AI models don't not know about yet, in a style that it can't imitate easily.
5. In general, posts that share knowledge and advice perform well. Leverage your deep expertise while explaining it in a way a 5th grader could understand. Even if they are brilliant people, assume they are reading fast with tired and distracted minds.

How LinkedIn's algorithm identifies 'Knowledge and Advice':

1. The post speaks to a distinct audience, targeting an addressable market.
2. The author is writing in their core subject area. The algorithm is evaluating *you* — and whether you're an authority in the thing you've posted about.
3. The post has meaningful comments from other subject matter experts.
4. The post has a perspective. The algorithm is looking to see whether a post is offering generic information (which is less rewarded) or is drawn from the writer's perspective and insights (which is more rewarded).

LinkedIn Changed Its Algorithms — Here's How Your Posts Will Get More Attention Now
To maximize your reach, it's time to share "knowledge and advice."

 <https://www.entrepreneur.com/science-technology/linkedin-changed-its-algorithms-heres-how-your-posts/454728>

Optimization: Use #hashtags and tag entities from LinkedIn's knowledge graph (like companies and people) for increased visibility. Hack that algorithm!

Outreach

Please follow our when messaging buyers. These lead to better business and social outcomes for all parties involved.

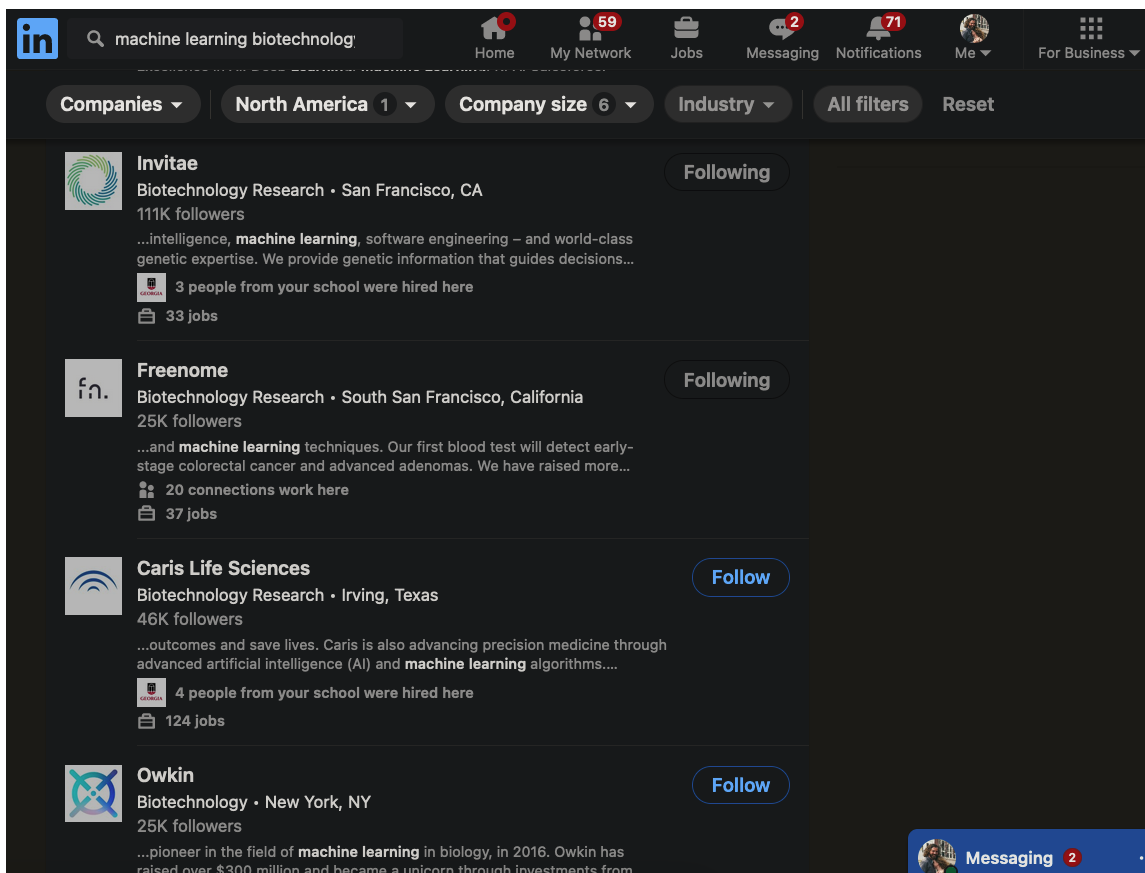

▼ Search for specific companies to target

Create lists of companies to reach out to. This can come from all kinds of lists you can find on the Internet, such as fast growing or news-worthy companies of various sorts. “Market maps” are also good for references (see the body of [Generative AI](#) for examples). Simply enough, though, you can use LinkedIn’s search feature.

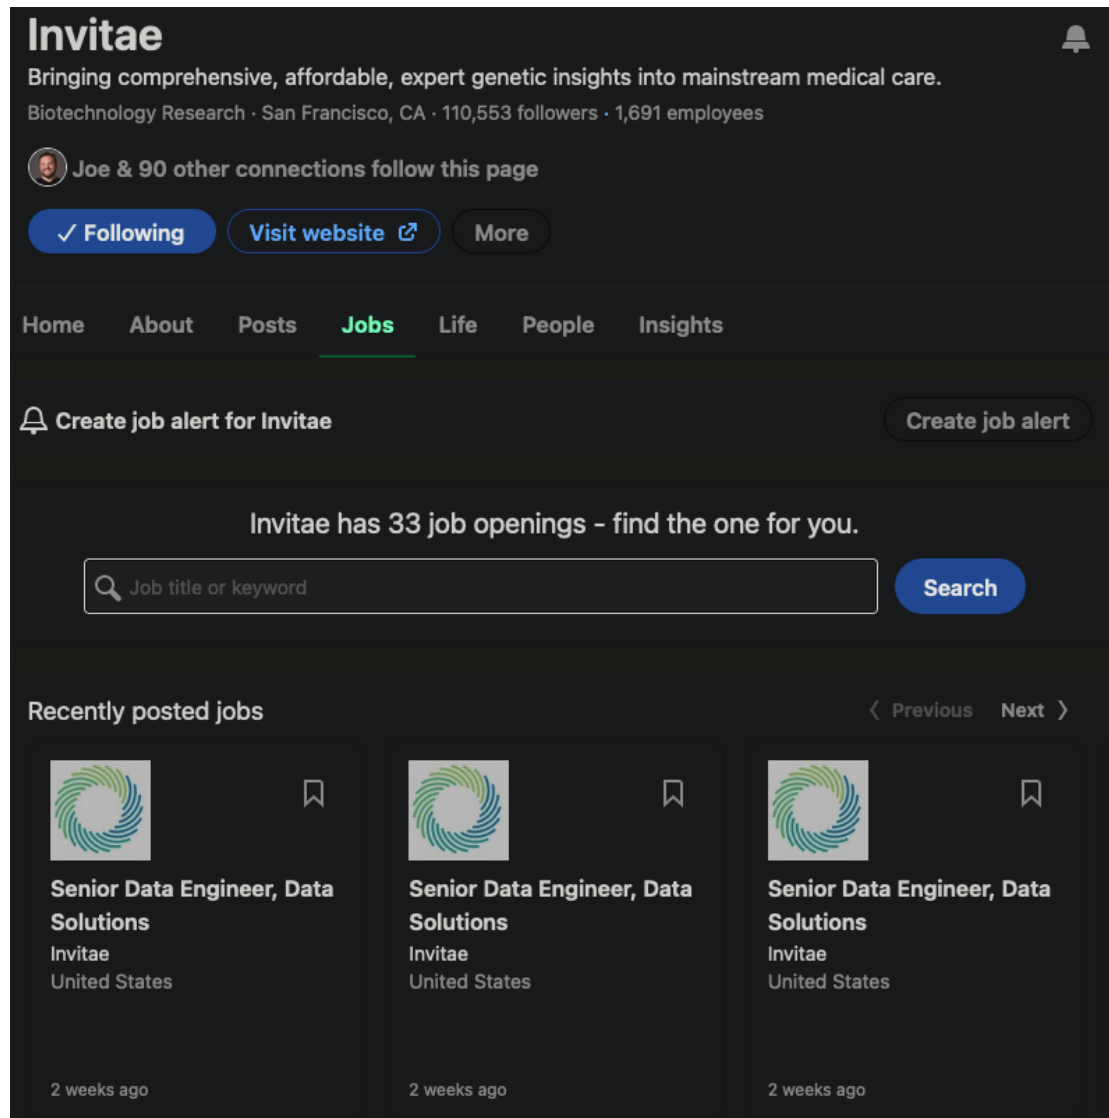

▼ Using LinkedIn Search

1. From the main search bar, try out different combinations and variations of your target markets and consulting services. For example, “biotechnology machine learning ” or “healthcare AI.”
2. Then filter by “Companies”, “Company Size”, and “Location”.
3. Identify companies with at least 10k followers. Popularity correlates with a strong brand, marketing efforts, and sales.

[https://www.linkedin.com/search/results/companies/?companyHqGeo=\[\"102221843\"\]&companySize=\[\"D\"%2C\"E\"%2C\"F\"%2C\"G\"%2C\"H\"%2C\"I\"\]&keywords=machine+learning+biotechnology&origin=FACETED_SEARCH&sid=\)pr](https://www.linkedin.com/search/results/companies/?companyHqGeo=[\)

4. Click on the company's name.
5. Then click the “Jobs” tab.
6. Then see if they are hiring for several roles related to the consulting services you can provide. **If they are hiring for folks like you or your team, then they are a target company!**

<https://www.linkedin.com/company/invitae/jobs/>

▼ From Jobs to Companies

1. From "Home", Click on the "Jobs" tab.
2. Search for different combinations and variations of your preferred job roles, target markets, and consulting services. For example, "generative AI art" or "software architect rust."

About the job

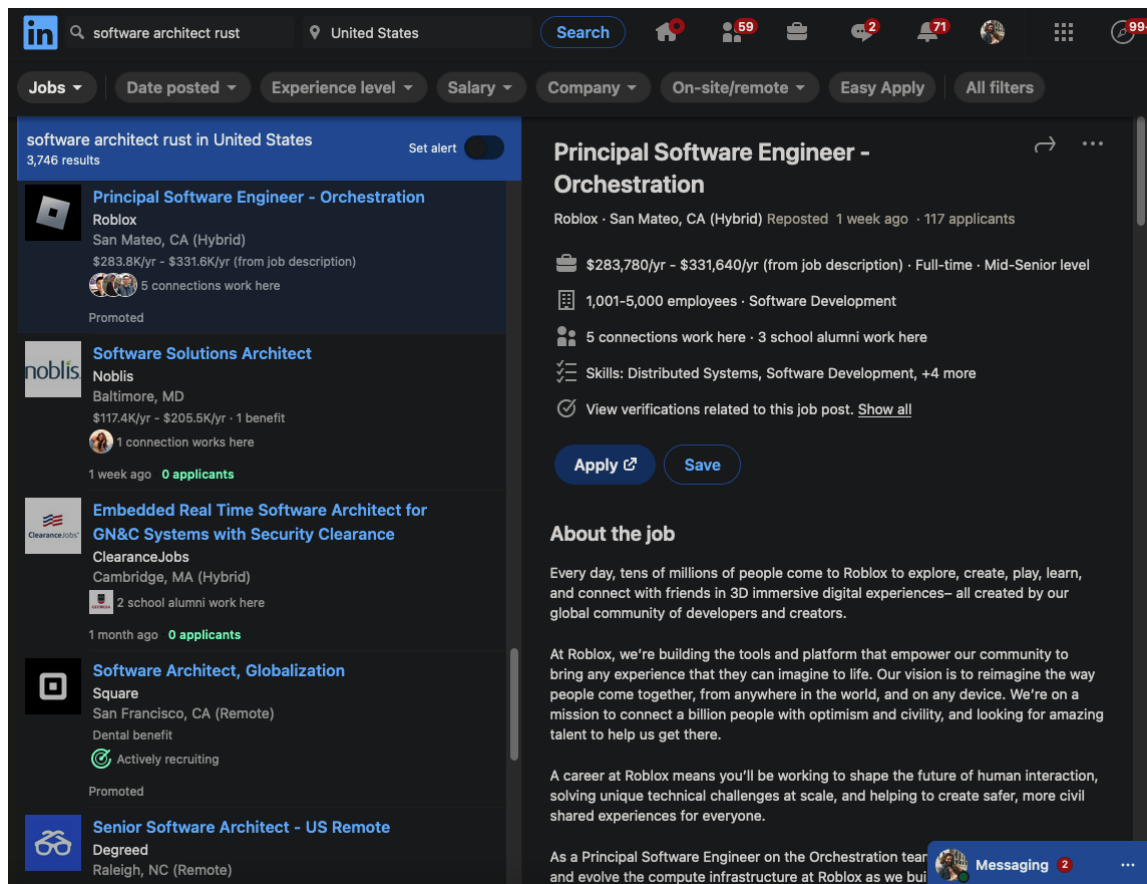

Chief Technology Officer

TLDR; We're looking for a CTO to build products that will give teachers the benefit of an AI co-pilot without requiring students to sit at Chromebooks.

We refuse to be ordinary, so neither is this job description! At the core of our work is our belief that teachers hold the power to move educational outcomes forward. We want technical experts who not only care deeply about solving problems but also about impact. It is our responsibility to include the

How to generate unlimited organic leads on LinkedIn

7

3. If there are many results, you can add filters like "Remote" work, "Experience level", and "Industry" to increase their relevance.
4. If they are hiring for a role you think is cool and their business meets your requirements, **you found a target company!**

▼ Reach out to target buyers

✉ They key here is to be highly personal. In the least personal approach, you should have one custom message per target company but use the buyer's first name. In the most custom approach, you **write a completely custom message per buyer**.

This is well worth the time as it leads to significantly higher conversation rates (like easily 10X) compared to an empty connection request or generic outreach message. It also kicks off the conversation with a clear purpose.

1. Navigate to a **target company**.
2. Click on the "People" tab.
3. Identify someone in a leadership position (think director level or higher), someone with "hiring" in their headline, or simply someone you would seriously want to work with.
4. Send them a personal and genuine message! **Your goal here at this stage is to gain a new connection, not necessarily a response. Once connected, you can message them with a stronger ask.**
 - a. Say hello, informally, using their name.

- b. Say what you do as relevant to their job role in one simple sentence. Be casual and use simple language.
 - c. Tell them why you found them interesting. Talk like an old friend!
 - d. Tell them how you could solve a pain point of theirs. Show you care.
 - e. End with a broad statement of how you could provide them value in the future. Gently rationalize why they would benefit from connecting with you (keep options open, not just "hire me"). Make friends! Create a warm connection!
5. Rinse and repeat! Copying and pasting messages is ok as long as you pay close attention to the individual's needs and ensure what you are saying is relevant and interesting to them.

 For a framework for creating good messaging, check out  [C.R.E.A.M. How do we come up with campaign ideas and copy?](#)

Example LinkedIn Messages

These are unreasonably effective for me. I'm still learning why people respond to me so well. I have so many more messages to add here... like hundreds of highly tailored examples. I also plan to organize and summarize these messages better, such as by using generative AI to create some "average" messages or manually identifying trends to create templates for specific contexts. Note: I only put messages in this database that have high response or conversion rates. - @Paul Prae

 How could we use generative AI here while following ethical sales principles like being highly relevant? I bet we could fine-tune an LLM on this database and pass it additional context when prompting, like the target company's website and buyer's LinkedIn profile, to personalize the message. Maybe a human in the loop plus a browser plug-in? 🤔

Sales Message Templates and Examples Database

Aa Purpose	Buyer Persona(s)
